

Since 2007, Builders of Hope has helped rebuild homes and lives by providing safe, affordable and energy-efficient housing to working families and individuals. Our solution is unique. By incorporating economic, environmental and social solutions as part of the process we are able

to further our affordable housing mission.

These elements all work together to provide housing for people like Phil Brickle, a 53-year-old minister. Phil lived in a trailer park before becoming the first homeowner in Barrington Village, one of Builders of Hope's housing developments in Raleigh. Dawana Stanley and her husband worked three jobs to save enough to buy their first home, which they now proudly share with their five children.

At Builders of Hope, we are making the dream of affordable homeownership a reality for the working class in North Carolina and beyond.

Making Homes More Affordable.

Builders of Hope rescues homes from demo-

fills. These houses are rehabilitated, either by being moved to a planned neighborhood or re-built on site, using extreme green building practices.

All are sold at cost to working families who earn below the median income. As a result, teachers, police officers, hair stylists, nurses and others can afford to purchase a quality home in the towns and cities where they work. Aside from the joys of home ownership, families reduce their transportation costs and enjoy a new sense of commitment and connection to a community they can be proud of.

The Builders of Hope approach benefits the communities we serve by providing quality affordable housing to families and individuals who otherwise face barriers to homeownership.

Saving Energy. And The Environment.

By saving homes from demolition, Builders of Hope is saving millions of pounds of debris from entering our landfills. And by rehabilitating homes, we reduce the amount of new building
