Omega Tau Omega Chapter*

Soil & Souls is an emerging global mission that teaches young adults to grow their own green job while making sure their own communities are food and water secure. Program components include a land based spiritual formation, while practicing permaculture sensibilities. We are young adults (18-35) from underserved communities in the U.S., and faith communities who want to engage young adults in a tangible mission that helps people, earns profits and protects the planet. *A Resilience Hub is a cluster of institutions that manage self sufficiency together.
