

A person with short dark hair, wearing a light pink or lavender button-down shirt, is seen from behind, sitting at a desk. They are looking out a large window with a grid pattern. The scene is brightly lit, with a strong lens flare effect from the sun or a bright light source. On the desk in the foreground, there are some papers, a small box, and a pen. The overall atmosphere is professional and hopeful.

Small Business Sector-Specific Resource Guide

Information to Help You
Reopen Your Business

Table of Contents

Please note this document is current as of **May 20, 2020** and guidelines have been pulled from several sources of information in an effort to provide small businesses with easy access to the best available resources. *This information will be updated as Governor Cooper issues additional guidelines for Phase 2 and Phase 3 reopening.*

Symptoms of COVID-19

People with COVID-19 have had a wide range of symptoms reported — ranging from mild symptoms to severe illness.

Symptoms may appear 2-14 days after exposure to the virus.

People with these symptoms may have COVID-19:

- Cough
- Shortness of breath or difficulty breathing
- Fever
- Chills
- Muscle pain
- Sore throat
- New loss of taste or smell

Children have similar symptoms to adults and generally have mild illness.

This list is not all inclusive. Other less common symptoms have been reported, including gastrointestinal symptoms like nausea, vomiting or diarrhea.

When to Seek Emergency Medical Attention

Look for **emergency warning signs*** for COVID-19. If someone is showing any of these signs, **seek emergency medical care immediately.**

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion
- Inability to wake or stay awake
- Bluish lips or face

**This list is not all possible symptoms. Please call your medical provider for any other symptoms that are severe or concerning to you.*

Call 911 or call ahead to your local emergency facility: Notify the operator that you are seeking care for someone who has or may have COVID-19.

Cleaning and Disinfection

Where, How to Accomplish and How Frequent

1 Develop Your Plan

DETERMINE WHAT NEEDS TO BE CLEANED. Areas unoccupied for 7 or more days need only routine cleaning. Maintain existing cleaning practices for outdoor areas.

DETERMINE HOW AREAS WILL BE DISINFECTED. Consider the type of surface and how often the surface is touched. Prioritize disinfecting frequently touched surfaces.

CONSIDER THE RESOURCES AND EQUIPMENT NEEDED. Keep in mind the availability of cleaning products and personal protective equipment (PPE) appropriate for cleaners and disinfectants.

2 Implement

CLEAN VISIBLY DIRTY SURFACES WITH SOAP AND WATER prior to disinfection.

USE THE APPROPRIATE CLEANING OR DISINFECTANT PRODUCT. Use an EPA-approved disinfectant against COVID-19 and read the label to make sure it meets your needs.

ALWAYS FOLLOW THE DIRECTIONS ON THE LABEL. The label will include safety information and application instructions. Keep disinfectants out of the reach of children.

3 Maintain and Revise

CONTINUE ROUTINE CLEANING AND DISINFECTION. Continue or revise your plan based upon appropriate disinfectant and PPE availability. Dirty surfaces should be cleaned with soap and water prior to disinfection. Routinely disinfect frequently touched surfaces at least daily.

MAINTAIN SAFE PRACTICES such as frequent handwashing, using cloth face coverings, and staying home if you are sick.

CONTINUE PRACTICES THAT REDUCE THE POTENTIAL FOR EXPOSURE. Maintain social distancing, staying six feet away from others. Reduce sharing of common spaces and frequently touched objects.

All Sector Information and Resources

Cleaning and Disinfection

What Areas Need Disinfectants vs. Sanitizers

- Cleaning and disinfecting work together
- Exclude areas outdoors
- [Not all chemicals are the same](#)
- Availability is an issue
- Sanitize food contact

GUIDANCE FOR CLEANING & DISINFECTING PUBLIC SPACES, WORKPLACES, BUSINESSES, SCHOOLS, AND HOMES

1 DEVELOP YOUR PLAN
DETERMINE WHAT NEEDS TO BE CLEANED. Areas unoccupied for 7 or more days need only routine cleaning. Maintain existing cleaning practices for outdoor areas.
DETERMINE HOW AREAS WILL BE DISINFECTED. Consider the type of surface and how often the surface is touched. Prioritize disinfecting frequently touched surfaces.
CONSIDER THE RESOURCES AND EQUIPMENT NEEDED. Keep in mind the availability of cleaning products and personal protective equipment (PPE) appropriate for cleaners and disinfectants.
Follow guidance from state, tribal, local, and territorial authorities.

2 IMPLEMENT
CLEAN VISIBLY DIRTY SURFACES WITH SOAP AND WATER prior to disinfection.
USE THE APPROPRIATE CLEANING OR DISINFECTANT PRODUCT. Use an EPA-approved disinfectant against COVID-19, and read the label to make sure it meets your needs.
ALWAYS FOLLOW THE DIRECTIONS ON THE LABEL. The label will include safety information and application instructions. Keep disinfectants out of the reach of children.

3 MAINTAIN AND CONTINUE ROUTINE CLEANING
Continue or revise your plan: disinfectant and PPE available be cleaned with soap and water. Routinely disinfect frequently touched surfaces.
MAINTAIN SAFE PRACTICES: handwashing, using cloth face coverings if you are sick.
CONTINUE PRACTICES THAT KEEP SPACES FREQUENTLY TOUCHED.

For more information, please visit: [CORONAVIRUS.GOV](https://www.cdc.gov/coronavirus)

6 Steps for Safe & Effective Disinfectant Use

Step 1: Check that your product is EPA-approved
Find the EPA registration number on the product. Then, check to see if it is on EPA's list of approved disinfectants at: [epa.gov/istat](https://www.epa.gov/istat)

Step 2: Read the directions
Follow the product's directions. Check "use sites" and "surface types" to see where you can use the product. Read the "precautionary statements."

Step 3: Pre-clean the surface
Make sure to wash the surface with soap and water if the directions mention pre-cleaning or if the surface is visibly dirty.

Step 4: Follow the contact time
You can find the contact time in the directions. The surface should remain wet the whole time to ensure the product is effective.

Step 5: Wear gloves and wash your hands
For disposable gloves, discard them after each cleaning. For reusable gloves, dedicate a pair to disinfecting COVID-19. Wash your hands after removing the gloves.

Step 6: Lock it up
Keep lids tightly closed and store out of reach of children.

Methods to Reduce and Mitigate Transmission Top 10 Tips to Protect Employee Health

1. Actively encourage sick employees to stay home.
2. Develop other flexible policies for scheduling and telework (if feasible) and create leave policies.
3. Promote etiquette for coughing and sneezing and handwashing.
4. Perform routine environmental cleaning.
5. Provide education and training materials.
6. Have conversations with employees about their concerns.
7. Talk with companies that provide your business with contract or temporary employees about their plans.
8. Plan to implement practices to minimize face-to-face contact between employees.
9. Consider the need for travel and explore alternatives.
10. If an employee becomes sick while at work, they should be sent home immediately.

Prepare your Small Business and Employees for the Effects of COVID-19

During an infectious disease outbreak, such as the current outbreak of COVID-19, small business owners must prepare for disruption in their business as well as prepare to protect their employees' health and safety in the workplace.

These steps are recommended to protect employees and prepare your business for disruption:

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. It spreads between people who are in close contact with one another (within about 6 feet) and through respiratory droplets produced when an infected person coughs or sneezes. **Symptoms** (<https://www.cdc.gov/coronavirus/2019-ncov/about/symptoms.html>) can include fever, cough, or difficulty breathing, which may appear 2-14 days after exposure.

Identify a workplace coordinator who will be responsible for COVID-19 issues and their impact at the workplace.

Examine policies for leave, telework, and employee compensation.

- Leave policies should be flexible and non-punitive, and allow sick employees to stay home and away from co-workers. Leave policies should also account for employees who need to stay home with their children if there are school or childcare closures, or to care for sick family members.
- When possible, use flexible workites (e.g., telework) and flexible work hours (e.g., staggered shifts) to help establish policies and practices for social distancing (maintaining distance of approximately 6 feet or 2 meters) between employees and others, especially if social distancing is recommended by state and local health authorities.

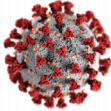

Review your leave policies with all employees and provide information about available employee assistance services. Share information on steps they can take to protect themselves at work and at home, and any available.

Identify essential employees and business functions, and other critical inputs such as raw materials, suppliers, subcontractor services/products, and logistics required to maintain business operations. Explore ways you can continue business operations if there are disruptions.

Prepare business continuity plans for significant absenteeism, supply chain disruptions, or changes in the way you need to conduct business.

Establish an emergency communications plan. Identify key contacts (with back-ups), chain of communications (including suppliers and customers), and processes for tracking and communicating about business and employee status.

Share your response plans with employees and clearly communicate expectations. It is important to let employees know plans and expectations if COVID-19 occurs in communities where you have a workplace.

All Sector Information and Resources

Methods to Reduce and Mitigate Transmission

Washing Hands and Face Masks

1. Washing your hands is the simplest, most effective way to slow the spread and protect yourself and others.
2. The Centers for Disease Control and Prevention (CDC) recommends wearing face masks when in public settings where social distancing may be difficult.
3. Surgical masks and N-95 respirators are still critically needed for healthcare workers. Cloth masks help conserve those supplies.
4. Cloth face coverings should:
 - Fit snugly but comfortably against the sides of the face
 - Cover both the mouth and nose
 - Be secured with ties or ear loops
 - Include multiple layers of fabric
 - Allow for unrestricted breathing
 - Be able to be laundered without damage or change to shape
5. When removing your mask, be careful not to touch your eyes, nose or mouth. Wash your hands immediately after removing your mask. Do not take your mask on and off while it's in use.
6. Cloth masks should be washed regularly, depending on how often you use them. Simply toss your mask in a washing machine to clean it.

OSHA ALERT

COVID-19 Guidance for the Construction Workforce

OSHA is committed to protecting the health and safety of America's workers and workplaces during these unprecedented times. The agency will be issuing a series of industry-specific alerts designed to keep workers safe.

When working in the construction industry, the following tips can help reduce the risk of exposure to the coronavirus:

- Encourage workers to stay home if they are sick.
- Allow workers to wear masks over their nose and mouth to prevent them from spreading the virus.
- Continue to use other normal control measures, including personal protective equipment (PPE), necessary to protect workers from other job hazards associated with construction activities.
- Advise workers to avoid physical contact with others and direct employees/contractors/visitors to increase personal space to at least six feet, where possible. Where work trailers are used, all workers should maintain social distancing while inside the trailers.
- Train workers how to properly put on, use/wear, and take off protective clothing and equipment.
- Encourage respiratory etiquette, including covering coughs and sneezes.
- Promote personal hygiene. If workers do not have immediate access to soap and water for handwashing, provide alcohol-based hand rubs containing at least 60 percent alcohol.
- Use Environmental Protection Agency-approved cleaning chemicals from [List N](#) or that have label claims against the coronavirus.
- To the extent tools or equipment must be shared, provide and instruct workers to use alcohol-based wipes to clean tools before and after use. When cleaning tools and equipment, workers should consult manufacturer recommendations for proper cleaning techniques and restrictions.
- Keep in-person meetings (including toolbox talks and safety meetings) as short as possible, limit the number of workers in attendance, and use social distancing practices.
- Clean and disinfect portable jobsite toilets regularly. Hand sanitizer dispensers should be filled regularly. Frequently-touched items (i.e., door pulls and toilet seats) should be disinfected.
- Encourage workers to report any safety and health concerns.

For more information, visit www.osha.gov/coronavirus or call 1-800-321-OSHA (6742).

OSHA issues alerts to draw attention to worker safety and health issues and solutions.

Construction Sites

SAFETY GUIDELINES DURING THE COVID-19 OUTBREAK

SOCIAL DISTANCING

Stay at least 6 feet (2 meters) from other people.

- Avoid all non-essential activities in public before working 7 or more miles. When paper PPE, when needed, is available for use, it should be used.
- Consider other work necessary to maintain that social distancing.

CLEAN PRACTICES

Clean AND disinfect frequently touched surfaces daily. This includes phones, keys, PPE, equipment, handles, door knobs, light switches, counter tops, handrails, chairs, key-stands, tables, benches, and chairs.

- Any hand sanitizer equipment must be readily accessible to users. This includes, but is not limited to, work equipment, contractor issued equipment, PPE, power and tool bags, vehicles and buses, lockers.

STAY HOME IF SICK

If you feel sick, stay home and reference the CDC website.

- If someone appears sick, suggest they go home from their experience, your presence. If warranted, they should be asked to leave site and follow paper protocol.

WASH HANDS OFTEN

Wash your hands often with soap and water for at least 20 seconds especially before you leave in public places, or after touching your nose, coughing, or sneezing.

- If hand sanitizer is not available, use alcohol-based hand sanitizer.
- Disposable hand sanitizer.
- Consider hand sanitizer dispensers in public housing.

COVER YOUR MOUTH

Always cover your mouth and nose with tissue when you cough or sneeze to avoid the spread of your illness.

- Throw used tissues in the trash.
- If you do not have tissues, use your elbow or sleeve for at least 20 seconds. If you are outdoors, avoid sneezing or coughing into your hands or clothing.

ESSENTIAL WORKERS ONLY

No non-essential employees on jobsite.

- Use face shields and work communication.

DISINFECT SURFACES

Find number of personnel allowed on site and to ensure personnel maintain 6 feet social distancing.

- Stagger your work with others on the floor every 15-30 minutes.
- Encourage shoe change.
- Consider having workers use for individual and hand only.

WASH YOUR FACE

Encourage outdoor readings, increase ventilation and use of clean air machines.

- Task scheduling to reduce air exchange through the HVAC system.
- If possible, use air purifiers.

LIMIT CAPACITY

Minimize gathering for lunch, breaks and meetings to less than 10 people and maintain social distancing.

- No shared use of high-pressure air machines.
- Avoid crowd for bathroom projects.
- Consider wearing face and hand sanitizer vehicles or designated lockers.

BEHIND CONTACTS SAY FIVE

Stay at least 6 feet from your supervisor and fellow employees.

ONLY HEALTH CHECKS

Check-in for health checks.

- COVID-19 check-in routine including health check before work begins. Ensure everyone looks healthy.

[SPANISH](#)

SAFETY GUIDELINES DURING THE COVID-19 OUTBREAK

ADMINISTRATIVE GUIDELINES

Post CDC guideline signage on your jobsite.

First aid kits should be well stocked and have nitrile gloves and a breathing barrier.

Update site logistics plans to show hand wash, hand sanitizer and tool disinfecting stations.

In the event of an employee calling in sick, determine reason for calling in sick. Are they sick themselves, taking care of others, previously exposed to others, or just unsure of what to do? Determine state of situation and notify job superintendent. This needs to be clearly communicated to subcontractors onsite as well.

In the event of a possible contamination on your jobsite, determine who the infected person was in contact, where they worked, what tools they used, etc. Relay information to Superintendent for further guidance. DO NOT suspend work, send people home, or take other actions unless directed by company leadership. DO NOT discuss any employees medical status as they are protected under HIPAA. Do your best to control spread of rumors and misinformation.

Keep roster of all persons on jobsite in case its needed for later reference (include owners, inspectors, visitors, delivery drivers, etc.)

Discourage carpooling large groups of workers. Best to drive alone or with a very small number of riders.

Have contractor state clearly in their daily reports steps taken to limit spread of virus.

Stagger lunches and breaks to avoid congregation of large groups in break area. Also consider spreading personnel out to multiple break areas or request breaks be taken offsite.

If temperature checks are implemented, make sure you are following HIPAA and your companies policies.

If a person is suspected of COVID 19, promptly notify the build and owner.

COVID-19 PREPAREDNESS PLAN

CONSTRUCTION SERVICES SINCE 1963
Myers & Chapman
Your Building Partner

Preventing the spread of COVID-19 starts before we all reach the jobsite. Protecting yourself from the spread of COVID-19 is as important when traveling to work as it is at work or at home. Due to the highly contagious nature of the virus, it's important we all do our part to ensure that we are protecting ourselves, our co-workers and in turn, our families and the general public.

When possible, employees should use personal transport to reduce the number of people in an enclosed space. If that is not an option, please follow this temporary guidance to help prevent further cases.

This guidance will be withdrawn once conditions allow.

2 SEATS
(Single-Bed Truck)

5 SEATS
(2-Row Car or SUV)

6-8 SEATS
(3-Row Car, SUV or Mini-Van)

# OF SEATS	MAX # OF OCCUPANTS
2	1
5	2
6-8	4

Always wear a mask in the vehicle!

Ensure the same crew members travel together each day to limit potential exposure to others.

- Wear PPE (face covering) while carpooling.
- Use hand sanitizer before entering/leaving vehicles.
- At gas stations, wash or sanitize your hands after handling gas pumps.

LIVING IN COMMON QUARTERS

If you share a small living space, the same risks apply. Remember to:

- Maintain as much physical distance as possible.
- Wash your hands often.
- Sanitize commonly touched surfaces (bathrooms, door knobs, light switches, etc.).
- DO NOT share food or drinks.
- Wear a face covering.

Regularly clean all common areas that are likely to be touched.

OSHA Guidance for Dentistry Workers and Employers

ADA

OSHA recently issued *Guidance for Dentistry Workers and Employers*; that information details recommendations relating to hazard assessments, including the use of respiratory protection PPE like N95 masks, during aerosol-generating procedures. The agency also has recommendations regarding performing emergent vs. routine procedures.

How does OSHA's May 1, 2020, release of *Guidance for Dentistry Workers and Employers* impact my practice? Does this new information supersede previous regulations? Are there additional possible enforcement consequences?

This new Guidance from OSHA does not establish any new requirements and is offered as guidance only.

Guidance documents create no new legal obligations and do not change or establish compliance responsibilities; that information is detailed in OSHA standards. Standards documents, also known as regulations, are regulatory requirements that the agency has established and published to serve as criteria for measuring whether employers are complying with the applicable laws. Employers in all industries, including health care, are compelled to comply with those applicable OSHA standards that are appropriate to that industry.

What do I need to do to comply with the hazard assessment recommendations in the Guidance? It recommends that employers assess the hazards that their workers may face; evaluate any risks; and select, implement and ensure that employees use the controls their employer has implemented to minimize any risks. How does that translate to changes I need to implement in my practice?

OSHA has had a long standing requirement that employers assess occupational hazards to which their workers may be exposed. The agency's *Standards* for Personal Protective Equipment (PPE) have always required employers to conduct hazard assessments on the topics of *General Requirements* and *Respiratory Protection*.

Some of the factors dentists should consider when conducting a hazard assessment under the new Guidance include:

- the incidence and prevalence of COVID-19 in their area
- COVID-19 testing in the area
- PPE
- the aerosol production that will occur during any procedures
- available aerosol reduction or mitigation methods, such as use of a rubber dam, availability of high speed evacuation, alternative treatment measures that might be employed

The ADA is developing a tool to assess an airborne hazard and to help guide dentists through this task. That resource will be posted on the ADA's COVID-19 website as soon as it's available.

Do OSHA regulations require the use of N95 masks during aerosol generating procedures?

The OSHA *Respiratory Protection Standard* requires that respirators, such as N95 masks, be used any time there is a respiratory hazard and effective engineering controls are not feasible or while they are being instituted.

If the hazard assessment conducted by an employer dentist determines that workers will be exposed to airborne contaminants, including aerosols containing SARS-CoV-2, that cannot be mitigated by the systems or controls put in place to protect them, the employer should consider implementing and following the respiratory protection standard.

According to the Guidance, aerosol-generating procedures performed on patients who are well are considered high risk procedures and the Guidance recommends, but does not require, that dentistry workers wear N95 masks when performing those procedures.

The Guidance does not require the use of N95 masks any time dentistry workers treat patients who are known to have tested positive for COVID-19 or who are suspected of having COVID-19. Pre-screening patients for symptoms of COVID-19, by phone and/or upon arrival for treatment, increases the likelihood those with COVID-19 symptoms will not be seen and treated. Of course, it's important to keep in mind some people with COVID-19 remain asymptomatic.

Share facts about COVID-19

Know the facts about coronavirus (COVID-19) and help stop the spread of rumors.

FACT 1 Diseases can make anyone sick regardless of their race or ethnicity. Fear and anxiety about COVID-19 can cause people to avoid or reject others even though they are not at risk for spreading the virus.

FACT 2 For most people, the immediate risk of becoming seriously ill from the virus that causes COVID-19 is thought to be low. Older adults and people of any age who have serious underlying medical conditions may be at higher risk for more serious complications from COVID-19.

FACT 3 Someone who has completed quarantine or has been released from isolation does not pose a risk of infection to other people. For up-to-date information, visit CDC's coronavirus disease 2019 web page.

FACT 4 There are simple things you can do to help keep yourself and others healthy.

- Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- When in public, wear a cloth face covering that covers your mouth and nose.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.

FACT 5 You can help stop COVID-19 by knowing the signs and symptoms, which can include:

- Fever
- Cough
- Shortness of breath

Seek medical attention immediately if you or someone you love has emergency warning signs, including:

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion or not able to be woken
- Bluish lips or face

This list is not all inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

Manufacturing and Meat and Poultry Processing Facilities

CDC Centers for Disease Control and Prevention

Coronavirus Disease 2019 (COVID-19)

Manufacturing Workers and Employers

Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA)

Manufacturing facilities are an integral part of the United States' supply chain. Some facilities are part of the **critical manufacturing sector** identified by the U.S. Department of Homeland Security's Cybersecurity and Infrastructure Security Agency. CDC's Critical Infrastructure Guidance advises that critical infrastructure workers may be permitted to continue work following potential exposure to coronavirus disease 2019 (COVID-19), provided they remain asymptomatic, have not had a positive test result for COVID-19, and additional precautions are implemented to protect them and the community. Facilities that are not part of the critical manufacturing sector should follow the CDC Public Health Recommendations for Community-Related Exposure following a workers' potential exposure to COVID-19.

All manufacturing facilities developing plans for continuing operations in the setting of COVID-19 occurring among workers or in the surrounding community should:

1. Work directly with appropriate state and local public health officials and occupational safety and health professionals;
2. Incorporate relevant aspects of CDC guidance, including but not limited to this document and the CDC's Critical Infrastructure Guidance; and
3. Incorporate guidance from other authoritative sources or regulatory bodies as needed.

This document provides guidance for manufacturing workers and employers. This guidance supplements but does not replace general guidance at these websites:

- www.osha.gov/coronavirus
- www.cdc.gov/coronavirus/2019-ncov/
- www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html
- www.cdc.gov/coronavirus/2019-ncov/community/guidance-business-response.html
- www.cdc.gov/coronavirus/2019-ncov/community/reopen-guidance.html

COVID-19 is a respiratory illness caused by a new virus called SARS-CoV-2. Symptoms can include a cough, shortness of breath or difficulty breathing, fever, chills, repeated shaking with chills, muscle pain, headache, sore throat, and new loss of taste or smell and can range from very mild to severe. Some people become so sick they must be admitted to the hospital and some people may die from the illness. Our understanding of this new virus and how it spreads is evolving as we learn more about COVID-19, so regularly check the CDC coronavirus website for the latest information. The virus is thought to spread mainly from person to person:

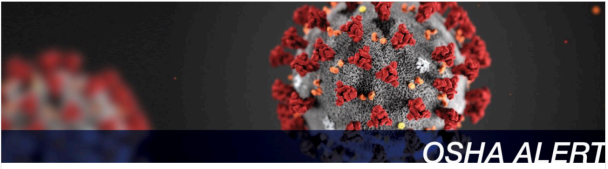

- Between people who are in close contact with one another (within about 6 feet, which is about two meters)
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks

Manufacturing Industries and Industrial Facilities

- Apparel and Footwear
- Battery Manufacturing
- Chemical Manufacturing
- Concrete and Concrete Products
- Fireworks
- Food Processing
- Lead Smelters
- Lubricant Manufacturing
- Metal Manufacturing
- Plastics Industry
- Furniture Manufacturing
- Automobile Manufacturing
- Printing Industry
- Pulp, Paper, and Paperboard Mills
- Semiconductor Industry
- Textiles
- Wood Product Industry

Note: This list is not exhaustive. This guidance may apply to other types of manufacturing activities. Guidance for workers and employers in meat and poultry processing, which is often considered a manufacturing industry, is provided separately.

[DOWNLOAD](#)

COVID-19 Guidance for the Manufacturing Industry Workforce

OSHA is committed to protecting the health and safety of America's workers and workplaces during these unprecedented times. The agency will be issuing a series of industry-specific alerts designed to keep workers safe.

If you are in the manufacturing industry, the following tips can help reduce the risk of exposure to the coronavirus:

- Encourage workers to stay home if they are sick.
- Establish flexible work hours (e.g., staggered shifts), if feasible.
- Practice sensible social distancing and maintain six feet between co-workers, where possible.
- For work activities where social distancing is a challenge, consider limiting the duration of these activities and/or implementing innovative approaches, such as temporarily moving or repositioning workstations to create more distance or installing barriers (e.g., plexiglass shields) between workstations.
- Monitor public health communications about COVID-19 recommendations for the workplace and ensure that workers have access to and understand that information.
- Train workers on how to properly put on, use/wear, take-off, and maintain protective clothing and equipment.
- Allow workers to wear masks over their nose and mouth to prevent spread of the virus.
- Encourage respiratory etiquette, including covering coughs and sneezes.
- Discourage workers from using other workers' tools and equipment.
- Use Environmental Protection Agency-approved cleaning chemicals from List N or that have label claims against the coronavirus.
- Promote personal hygiene. If workers do not have access to soap and water for handwashing, provide alcohol-based hand rubs containing at least 60 percent alcohol. Provide disinfectants and disposable towels workers can use to clean work surfaces.
- Encourage workers to report any safety and health concerns.

For more information, visit www.osha.gov/coronavirus or call 1-800-321-OSHA (6742).

OSHA issues alerts to draw attention to worker safety and health issues and solutions.

CDC Centers for Disease Control and Prevention

Coronavirus Disease 2019 (COVID-19)

Meat and Poultry Processing Workers and Employers

Interim Guidance from CDC and the Occupational Safety and Health Administration (OSHA)

Meat and poultry processing facilities are a component of the **critical infrastructure** within the Food and Agriculture Sector. CDC's Critical Infrastructure Guidance advises that critical infrastructure workers may be permitted to continue work following potential exposure to COVID-19, provided they remain asymptomatic, have not had a positive test result for COVID-19, and additional precautions are implemented to protect them and the community. All meat and poultry processing facilities developing plans for continuing operations in the setting of COVID-19 occurring among workers or in the surrounding community should (1) work directly with appropriate state and local public health officials and occupational safety and health professionals; (2) incorporate relevant aspects of CDC guidance, including but not limited to this document and the CDC's Critical Infrastructure Guidance; and (3) incorporate guidance from other authoritative sources or regulatory bodies as needed.

Multiple outbreaks of COVID-19 among meat and poultry processing facility workers have occurred in the United States recently. This document provides guidance for meat and poultry processing workers and employers—including those involved in beef, pork, and poultry operations. This guidance supplements but does not replace general guidance at these web sites:

- osha.gov/coronavirus
- <https://www.cdc.gov/coronavirus/2019-ncov/index.html>
- <https://www.cdc.gov/coronavirus/2019-ncov/community/critical-workers/implementing-safety-practices.html>

COVID-19 is a respiratory illness caused by a new virus called SARS-CoV-2. Symptoms often include a fever, cough, and shortness of breath and can range from very mild to severe. Some people become so sick they must be admitted to the hospital, and some people may die from the illness. Our understanding about the new virus and how the virus spreads is evolving as we learn more about COVID-19, so check the CDC website for the latest information. The virus is thought to spread mainly from person to person:

- Between people who are in close contact with one another (within about six feet, which is about two meters).
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks.

Recent studies indicate that people who are not showing symptoms can spread the virus. It may also be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes. This is not thought to be the main way the virus spreads, but we are still learning more about this virus. Workers at higher risk for serious illness include older adults and people of any age with chronic medical conditions. Policies and procedures addressing issues related to workers at higher risk of serious illness should be made in consultation with occupational medicine and human resource professionals.

Exposure risk among meat and poultry processing workers

Workers involved in meat and poultry processing are not exposed to SARS-CoV-2 through the meat products they handle. However, their work environments—processing lines and other areas in busy plants where they have close contact with coworkers and supervisors—may contribute substantially to their potential exposures. The risk of occupational transmission of SARS-CoV-2 depends on several factors. Some of these factors are described in the U.S. Department of Labor and U.S. Department of Health and Human Services' booklet *Guidance on Preparing Workplaces for COVID-19*. Distinctive factors that affect workers' risk for exposure to SARS-CoV-2 in meat and poultry processing workplaces include:

- **Distance between workers** – meat and poultry processing workers often work close to one another on processing lines. Workers may also be near one another at other times, such as when locking in or out, during breaks, or in locker/changing rooms.
- **Duration of contact** – meat and poultry processing workers often have prolonged closeness to coworkers (e.g., for 10-12 hours per shift). Continued contact with potentially infectious individuals increases the risk of SARS-CoV-2 transmission.

Pools (Unaffiliated with Summer Camps)

This [Guidance](#) Covers the Following Topics:

- Social Distancing and Minimizing Exposure
- Cloth Face Coverings
- Cleaning and Hygiene
- Monitoring for Symptoms
- Protecting Vulnerable Populations
- Combatting Misinformation
- Water and Ventilation Systems
- Additional Resources

NC DEPARTMENT OF HEALTH AND HUMAN SERVICES

Interim Guidance for Public Pools and Spas (May 22, 2020)

Governor Cooper has implemented a [three-phased approach](#) to slowly lift restrictions while combating COVID-19, protecting North Carolinians and working together to recover the economy.

Starting at 5pm on Friday May 22, 2020, North Carolina will begin Phase 2. Businesses and organizations should follow the guidelines below to prevent the spread of COVID-19.

Guidelines for Public Pools and Spas: Any place where people gather poses a risk for COVID-19 transmission. Operators of public pools and spas should create and implement a plan to minimize that risk. The guidance below will help operators of public pools and spas reduce the spread of COVID-19 in their communities.

Guidelines for Conducting Business: Any scenario in which many people gather together poses a risk for COVID-19 transmission. Public pools include municipal, school, hotel, motel, apartment, boarding house, athletic club, or other membership facility pools and spas, which are also called hot tubs or jacuzzies. All public pools and spas where groups of people gather should create and implement a plan to minimize the opportunity for COVID-19 transmission at their facility. The guidance below will help public pools and spas reduce the spread of COVID-19 in their communities. This guidance is intended to address risk related specifically to the pool and dressing room/locker room. Any additional attractions related to the pool area such as playground, snack bar, or fitness center should consult other issued guidance as appropriate.

This guidance covers the following topics:

- Social Distancing and Minimizing Exposure
- Cloth Face Coverings
- Cleaning and Hygiene
- Monitoring for Symptoms
- Protecting Vulnerable Populations
- Combatting Misinformation
- Water and Ventilation Systems
- Additional Resources

Social Distancing and Minimizing Exposure
[Social distancing](#) is one of the only weapons we have to decrease the spread of COVID-19. Social distancing ("physical distancing") means keeping space between yourself and other people outside of your home. Stay at least 6 feet (about 2 arms' length) from other people; do not gather in groups; stay out of crowded places and avoid mass gatherings. Phase 2 includes several requirements and recommendations to support social distancing in spaces where the public may gather.

GUIDANCE FOR EMPLOYERS TO PLAN AND RESPOND TO CORONAVIRUS (COVID-19)

The following guidance may help prevent workplace exposures to acute respiratory illnesses, including the coronavirus, in non-healthcare settings. The guidance also provides planning considerations if there are more widespread, community outbreaks of the coronavirus from the Centers for Disease Control and Prevention (CDC). This guidance is based on what is currently known about the coronavirus Disease 2019 (COVID-19).

All employers should be ready to implement strategies to protect their workforce from the coronavirus while ensuring continuity of operations. As with all illnesses, sick employees should stay home and away from the workplace, use cough and sneeze etiquette, frequently clean hands with soap and water, and routinely clean commonly touched surfaces.

TIPS FOR PREVENTING THE SPREAD OF THE CORONAVIRUS AT WORK FROM THE CDC
Source: <https://www.cdc.gov/coronavirus/2019-ncov/specific-groups/guidance-business-response.html>

IN ADVANCE OF EMPLOYEES GETTING SICK

- Determine whether flex working is an option: Review human resources policies and explore whether you can establish policies and practices, such as flexible workites (e.g., telecommuting) and flexible work hours. Supervisors should educate employees that if they become sick they should telework instead of coming into the workplace until symptoms are completely resolved.
- Create an employee communications plan: Establish a process to communicate the latest coronavirus information to employees and business partners (utilize the U.S. Chamber of Commerce Foundation's coronavirus (COVID-19) Workplace Tips For Employees). Anticipate employee fear, anxiety, rumors, and misinformation, and plan communications accordingly.
- Decide how to handle spikes in absenteeism: In some communities, early childhood programs and K-12 schools may be dismissed, particularly if coronavirus worsens. Determine how you will operate if absenteeism spikes from increases in sick employees, those who stay home to care for sick family members, and those who must stay home to watch their children if dismissed from school.
- Coordinate with state and local health officials: Coordination with state and local health officials is strongly encouraged for all businesses so that timely and accurate information can guide appropriate responses in each location where their operations reside. Given the intensity of an outbreak may differ according to geographic location, local health officials will be issuing guidance specific to their communities. Also, employers should take the time now to learn about plans in place in each community where they have a business by contacting their local public health department.
- Make a business continuity plan: Be prepared to change your business practices if needed to maintain critical operations (e.g., identify alternative suppliers, prioritize customers, consider digital meetings, or temporarily suspend some of your operations if needed).

NC DEPARTMENT OF HEALTH AND HUMAN SERVICES

Interim Coronavirus Disease 2019 (COVID-19) Guidance for Malls and Shopping Centers
March 23, 2020

Any scenario in which many people gather together poses a risk for COVID-19 transmission. All businesses and facilities that congregate people in an enclosed space, including but not limited to retail stores, movie theaters, and shopping malls, should create a plan to minimize the opportunity for COVID-19 transmission.

This guidance will help malls and shopping centers plan and prepare for COVID-19 in their communities.

Plan Ahead

- Review any emergency plans you already have and update them if necessary.
- Make a plan for what you will do if large numbers of employees are unable to attend work, which may occur if schools are closed or their family members are sick. Identify key positions and cross-train staff to ensure all essential functions will be covered.
- Stay informed about COVID-19 in your community.

Communicate

- Instruct patrons to stay home if they are sick. If applicable, have a flexible cancellation / rescheduling policy so sick people and people taking care of COVID-19 patients are able to stay home.
- If you have employees who are at a higher risk for complications from COVID-19, including people over 65 and those with pre-existing medical conditions such as diabetes, chronic lung disease and chronic heart disease, or a compromised immune system (e.g., cancer, cancer treatment, or other immunosuppressant treatments), find positions that minimize contact with the public.
- Create flexible sick leave policies so employees stay home from work when they are sick.
 - Employees may discontinue isolation and return to normal activities when it has been at least 7 days since their first day of illness AND they have been without fever for three days (72 hours) and their other symptoms are improving, in consultation with their healthcare providers and state and local health departments.
 - Employees should not ask for a negative COVID-19 test or a note from a medical provider for employees to return to work.
- Post signs encouraging patrons to leave immediately if they begin to show symptoms of illness, COVID-19 or otherwise.

Keep Everyone Healthy

- Have respiratory hygiene supplies available for employees and patrons, including hand sanitizer containing at least 60% alcohol, tissues, and lined trash cans.

Coronavirus Disease 2019 (COVID-19)

What Grocery and Food Retail Workers Need to Know about COVID-19

Coronavirus disease 2019 (COVID-19) is a respiratory illness caused by a virus called SARS-CoV-2. Symptoms often include cough, shortness of breath, fever, chills, muscle pain, sore throat, or new loss of taste or smell. Our understanding of how the virus spreads is evolving as we learn more about it, so check the CDC website for the latest information. The virus is thought to spread mainly from person-to-person:

- Between people who are in close contact with one another (within about 6 feet)
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks

Recent studies indicate that the virus can be spread by people who are not showing symptoms. It may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes. This is not thought to be the main way the virus spreads, but we are still learning more about this virus. Older adults and people of any age who have serious underlying medical conditions may be at higher risk for more serious complications from COVID-19.

PREVENT COVID-19 EXPOSURE AT WORK

As a grocery or food retail worker, how can I protect myself and slow the spread?

As a grocery or food retail worker, potential sources of exposures include close contact for prolonged periods of time with a customer with COVID-19 and touching your nose, mouth, or eyes after handling items, cash, or merchandise that customers with COVID-19 have touched.

- Notify your supervisor and stay home if having symptoms (fever, cough, or shortness of breath).
- Follow CDC recommended steps if you are sick. You should not return to work until the criteria to discontinue home isolation are met, in consultation with healthcare providers and state and local health departments.
- Follow CDC recommended precautions and notify your supervisor if you are well but have a sick family member at home with COVID-19.
